

Adolescence

This text focuses on understanding adolescents' development within the contexts of their environment and social relationships. It includes over 800 new studies and more than 100 new references on development within ethnic minority populations.

Coming of age: the emerging science of adolescence. It's widely accepted that adolescents are misunderstood. Less well known is how far we've come. Scientists have announced that adolescence, previously thought to end at 19, now stretches from 10 to 24, and they recommended that laws be changed to reflect this. Adolescence is one of the most rapid phases of human development. The unique nature and importance of adolescence mandates explicit and specific attention. Adolescence typically describes the years between ages 13 and 19 and can be considered the transitional stage from childhood to adulthood. However, the physical and psychological changes that occur in adolescence can start earlier, during the preteen or tween years (ages 9 through 12). Adolescence, these years from puberty to adulthood, may be roughly divided into three stages: early adolescence, generally ages eleven to thirteen; middle adolescence, generally ages fourteen to sixteen; and late adolescence, generally ages seventeen to nineteen. In this editorial, we suggest that while basic research on brain development during adolescence appears to be thriving, our understanding of how to approach adolescence is still in its infancy. A longer adolescence leads to healthier growth, particularly for girls without the competing nutritional demands of early pregnancy, and greater attention to mental health during adolescence is crucial. Adolescence is the time when you begin changing from a kid to an adult. This doesn't happen overnight; in fact, it happens over several years. Adolescence (from Latin *adolescere*, meaning to grow up) is a transitional stage of physical and psychological development that generally occurs during the period from puberty to legal adulthood (age of majority). Adolescence definition is - the period of life when a child develops into an adult : the period from puberty to maturity terminating legally at the age of majority. Adolescence is the phase of life stretching between childhood and adulthood, and its definition has long posed a conundrum. Adolescence
