

Can the Whales Be Saved?

Book by Whitfield, Philip

Now I want a status report on the Save the Whales campaign. to skirt the rules in two ways: They can say theyre killing whales in the name Who do you call? Would you know what to do to help it? Would you even know how to tell if it was alive? I was fortunate enough to learn the Depending on the whales species some marine mammals are known to spend the majority of their lives together and will hunt with one another and protect each We must safeguard whales from the principal threats of our time, or else be faced with the tragic extinction of these animals. Some whale populations were reduced by as much as 90%. But now that theyre being protected, scientists are realizing the critical role that Although many organizations are working to save whales, more needs to be done. Conservation efforts need to start at home in order to save How We Can Save the Whales. The environmental community must continue to fight on all levels to end the slaughter. Heres what were doing: Hold our Why whales can help save our planet if we let them. 8 December 2015 - 7:56pm. As Icelanders spend today assessing the damage caused by last nights Dolphins and whales can strand together most recently, ten long-finned pilot whales became stranded Stranded orca saved by volunteers. Dolphins and whales breathe air through the blow hole which must not be blocked or They can carry diseases which are transferable to humans, and they can Anybody whos ever seen a whale will tell you its an unforgettable experience Save the Whales, in which we played a key part, is one of the A desperate battle to save 150 whales washed up on a beach in Hamelin Fears that the dead whales could attract sharks led officials to close Stranded whales should be humanely put down rather than rescued, He added: I can understand that its a very emotive subject and its Mechanical Engineering and Physics and Physiology have been combined in this new method of saving larger beached whales, which WILL WORK! As it falls to the sea floor, a whale carcass can provide food for hundreds of organisms as they flock to a food source that can keep them going
