

Life: Origin, Evolution, Extinction: The epic story of life on earth (New Scientist: The Collection Book 3)

How did life begin? This is one of the great eternal questions. All cultures have a creation story, but modern science has the best one of all a near-complete account of how our planet went from a barren lump of rock to one covered in a rich diversity of plants, animals and microbes. This issue of New Scientist: The Collection takes you on a journey through life's origins and the watershed moments in its history. From spectacular fossils to evolutionary theory, it tells the epic story of the only living planet we know of in the Universe. And where there's life, there's death. The fossil record reveals that most species that existed have gone extinct. Why? And what would happen to the planet if all life suddenly died? Prepare to go on a journey of a lifetime.

Discover more natural history stories from the Museum collections and NEWS. Scientists have traced what dinosaur DNA could have looked like Oceans are crucial for life on Earth - but did it begin at a hydrothermal vent? Richard Sabin explains how a subspecies extinction could affect rhino evolution. This book is a collection of essays from 50 different scientists, all holding Ph.D.s in To explain the origin and diversity of life on Earth, nearly all peoples of the world . Of particular interest to this collection is Chapter 3, SCIENCE, written by Evolution occurs from the survivors of extinction, radiating to fill in new niches.
