Pruning is done for various reasons - 16 min - Uploaded by Penn State Pesticide Education Program This video covers basic principles for pruning and training apple trees and new strategies to maximize yield and quality. Featuring more than 800 plants and step-by-step instructions to pruning and training hundreds of trees, shrubs, and climbing plants, this comprehensive guide is the essential guide to pruning and training your garden plants with confidence. Q: What is the difference between pruning and training fruit trees? Answer: Pruning is one way to train a fruit tree, but it can also be used to begin training younger trees for pollarding or for trellising to form an orchard. Maximising light interception and light distribution in orchards can help growers to maximise yield and quality, according to an international tree fruit expert. Many modern tree fruit orchards are planted high-density using dwarfing rootstocks and training systems designed for maximum sunlight interception, higher fruit yield and quality. This guide to pruning and training contains, in just one volume, the information gardeners need to maintain attractive, well-pruned and trained trees, shrubs, and climbing plants. Pruning is a horticultural and silvicultural practice involving the selective removal of certain parts of a plant. When performed correctly it is used on very young trees, and can be used to begin training younger trees for pollarding or for trellising to form an orchard.
